NormLedger™
COMPLIANCE GOVERNANCE

Your accessibility expertise.

INCLUSION, EVIDENCED.

Your clients need more than an occasional scan: they need a sustainable process to assign, track and verify accessibility improvements across releases. NormLedger helps your clients manage the work between assessments - with ownership, verification and evidence they can retrieve later.

A CONTINUOUS LOOP: MONITOR, EVIDENCE, GOVERN, PROVE

MONITOR

Scheduled and on-demand scans against the law you declare. Every WCAG 2.1 and 2.2 AA criterion gets a recorded outcome; people review what automation cannot decide.

EVIDENCE

Every finding and decision goes into an append-only log, chained with SHA-256 and timestamped by an independent authority (RFC 3161).

GOVERN

Failures become tasks with owners and deadlines. A verified rescan closes them; a recurrence reopens them. Overdue work escalates.

PROVE

Versioned accessibility statements, evidence pack exports anyone can verify, and read-only access for your auditors.

WAYS WE CAN WORK TOGETHER

- REFERRAL | Introduce qualified organisations with relevant market digital services.
- RESELLER | Package NormLedger as a recurring governance component of your client offering.
- DELIVERY PARTNER | Combine your audits, implementation and remediation expertise with NormLedger ongoing governance workflows.
- JOINT PILOT | validate an end-to-end client journey together.

WHY PARTNERS BENEFIT

- Complement existing audit and development revenue with an ongoing service.
- Give clients a structured way to demonstrate follow-through after your work.
- Use evidence exports and read-only auditor access to support repeat assessments.

CLEAR ROLES, TRANSPARENT ECONOMICS

Partners lead client relationships and professional services as agreed. NormLedger provides the platform and agreed product support. Clients remain responsible for remediation and legal applicability decisions. Referral fees, reseller margins, support boundaries, data handling and lead ownership are negotiated; no fixed margin or exclusivity is implied.

START WITH ONE CLIENT USE CASE

Identify a relevant customer, agree a small pilot and evaluate implementation effort, customer outcomes and the economics of repeatable delivery.
